Nebius Group announces closings of its public offering of Class A ordinary shares and concurrent private offering of convertible senior notes, with aggregate gross proceeds to date of approximately $4.2 billion

Amsterdam, September 15, 2025 — Nebius Group N.V. ("Nebius Group" or the "Company"; NASDAQ: NBIS), a leading AI infrastructure company, today announced the closing of its previously announced underwritten public offering of 10,810,811 Class A ordinary shares at an offering price of $92.50 per Class A share. The underwriters of such offering have a 30-day option (starting from September 10, 2025) to purchase up to an additional 1,621,621 Class A shares at the offering price, less underwriting discounts and commissions. The Company also announced the closing of its previously announced offering of convertible senior notes, in two series: 1.00% convertible notes due 2030 (the "2030 Notes") and 2.75% convertible notes due 2032 (the "2032 Notes", and together with the 2030 Notes, the "Notes"), in a private offering to qualified institutional buyers pursuant to Rule 144A under the Securities Act of 1933, as amended. The initial purchasers exercised the option to purchase additional Notes for settlement at closing. Accordingly, the aggregate principal amount of each series of Notes is approximately $1.58 billion, and the total aggregate original principal amount of the Notes is approximately $3.16 billion.

As previously stated, the Company expects to finance the capital expenditures associated with its recently announced agreement to provide AI infrastructure to Microsoft through a combination of cash flows under the arrangement and the issuance of debt secured against the contract and related infrastructure, at terms that reflect the credit quality of the counterparty. The Company anticipates that it will use some of the proceeds of such financing, once secured, together with the proceeds of the Class A shares and Notes offerings closed today, to finance the continuing growth of its business, including the acquisition of additional compute power and hardware, securing strategic high-quality and well-located land plots

with reliable providers, the expansion of its data center footprint, and for general corporate purposes.
